JETRO · THAPAR JAPAN HACKATHON 2026 · 01JETRO-PS-01

SHINRAI 信頼

Partner verification for Japanese SMEs entering India

A Japanese SME enters an Indian company's name, CIN or GSTIN. In under 60 seconds, Shinrai reads the public registry, tax, court and insolvency records, maps the people behind the company, and returns a **Japanese-language trust report with a 100-point score**, the format Japanese firms already use at home.

Before the handshake, the hanko and the first purchase order: **know exactly who you are signing with.**

3D view of the network behind one demo company: its directors and their other companies. Red = struck off or in insolvency. Synthetic demo data.

THE GAP IN ONE LINE

1,434 Japanese companies operate in India, almost the same as in 2018.

1,434
Japanese companies in India (Oct 2024), vs ~1,400 in 2018: flat for six years

~20%
of them are SMEs. JETRO India calls SME presence "very low"

¥10 TRILLION
Japan's 10-year private investment goal for India

2×
India's stated target for Japanese firms in India this decade (Aug 2026)

Sources: Embassy of Japan in India & JETRO, List of Japanese Companies in India (Oct 2024); JETRO India via Tsinghua G20E (Aug 2023); Nikkei/Tuoi Tre (3 Aug 2026); Asianet Newsable (24 Aug 2026).

INDIA RANKS #1. SO WHY AREN'T JAPANESE SMES ARRIVING?

THE REAL PROBLEM

It isn't market access. It's trust.

India has been ranked the most promising overseas market by Japanese manufacturers (JBIC) four years running. Yet the count of Japanese companies has barely moved since 2018. Japan's own diplomats name the barriers: **opaque legal systems and rules that differ state to state.** For an SME with no Indian office, the first question isn't "can we sell?" It's **"can we trust this partner?"**

> FROM THE BRIEF
>
> "...navigate Indian market complexities, **find verified local partners**, and overcome regulatory and cultural hurdles."

WHY IT STILL EXISTS

01 INFORMATION *asymmetry*

Facts on Indian companies are public but scattered across MCA21, the GST portal, eCourts and NCLT/IBBI, in English and Indian legal formats. A Tokyo SME can't read those signals.

02 NO SCORE *in Japanese*

At home, firms check a Teikoku Databank-style 100-point score (評点) before trading. No Japanese-language equivalent exists for an Indian counterparty.

03 DILIGENCE *is slow and costly*

Consultants and overseas credit reports are ordered one company at a time and take days to weeks. An SME screening ten partners can't afford it, so it relies on introductions and gut feel.

WHAT A BAD PARTNER COSTS, EVEN THE LARGEST JAPANESE FIRMS

$1.17 BN

NTT Docomo × Tata: arbitration award over the JV exit, enforced by the Delhi High Court in 2017

₹3,500 CR

Daiichi Sankyo × Ranbaxy promoters: arbitral award upheld by the Supreme Court after years of litigation

4.3 LAKH+

Indian companies struck off as non-operational in government special drives. Shells exist at scale

If firms with full legal teams get burned, **an SME with no Indian office has no margin for error.**

HOW AN SME PICKS AN INDIAN PARTNER TODAY

FIND — trade fair · JETRO matching · referral

CHECK — English filings, no context, no score

TRUST — introductions and gut feel

SIGN — JV · distribution · supply contract

DISCOVER — struck-off · insolvency · unpaid · dispute

Sources: Nikkei via Tuoi Tre (3 Aug 2026): barriers, JBIC ranking, 1,434 count; Embassy of Japan / JETRO (2024); LiveLaw (Docomo–Tata, 2017; Daiichi–Ranbaxy SC order); Outlook Business (MCA special drives). The "today" journey is our synthesis, to be validated in SME interviews.

TYPE A NAME. GET A VERDICT IN JAPANESE.

INPUT
company name · CIN · GSTIN

INTELLIGENCE
records + people graph + rules

ACTION
信頼スコア + report in Japanese

THREE FEATURES, NOTHING MORE

01
IDENTITY CHECK
実在確認

Is the company real and active? Registry status, date of incorporation, paid-up capital, filing history, registered address, and GST registration status, all cross-matched so the name, CIN and GSTIN point to the same legal entity.

02
RED-FLAG GRAPH
関係者ネットワーク

Who is really behind it? Builds the network of directors and their other companies, then flags struck-off links, insolvency (NCLT/IBBI), court cases (eCourts) and adverse news. **This is the risk a Google search misses.**

03
SCORE + REPORT
信頼スコア・日本語レポート

A verdict a Japanese manager can act on. A 100-point score in the familiar 評点 style, with a business-Japanese summary in which every flag links to the record it came from, plus a recommended next step.

10 SEC

The live moment: a judge names any Indian company. Shinrai returns its score, red flags and Japanese summary on screen. Then a clean company comes back **green**, so the score visibly tells the two apart.

Report shown is a design mock-up using a synthetic demo company; CIN is masked. Live demos use real public records, cited per flag.

HOW IT WORKS: FIVE LAYERS, EVERY CLAIM CITED

05 JAPANESE REPORT
敬語 summary · cited · PDF export

04 RULE ENGINE + SCORE
deterministic flags → 信頼スコア

03 RISK GRAPH
directors ↔ companies ↔ cases

02 ENTITY RESOLUTION
one company, one person, across sources

01 PUBLIC SOURCES
MCA21 · GST · eCourts · NCLT/IBBI · news

PUBLIC SOURCES READ, SIGNALS EXTRACTED

Source	What we read	Signal
MCA21 registry	Company master data, filings, directors (DIN) and their other companies	Status · capital · filing delays
GST portal	Taxpayer search: registration status and type	Active / cancelled
eCourts · NCLT · IBBI	Cases by party name; insolvency proceedings	Litigation · insolvency
MCA strike-off lists	Companies removed as non-operational	Shell / defunct links
Adverse news	News mentions of fraud, default or raids	Reputation risk

THE AI BOUNDARY

why the score can be trusted

LLM DOES

- Reads messy filings and names into structured fields
- Writes the summary in business Japanese (敬語)

LLM NEVER DOES

- Decide a flag or the score: deterministic rules do
- State anything without a source. **No record, no flag.**

STACK FastAPI · PostgreSQL · NetworkX director graph · Playwright fetchers with a cache layer · LLM for extraction and Japanese generation · React report UI · PDF export for the SME's internal approval (稟議)

TRACE OF ONE CHECK (DEMO COMPANY)

NAME	3	9	2	50 / 100
→ CIN found	directors	linked cos.	struck off	in 41 s

Entity resolution links the same person or company across sources by DIN, CIN, GSTIN and name similarity (Fellegi–Sunter). Unresolved matches are shown as "possible", never merged silently.

THE SCIENCE AND THE GROUNDWORK

THE 信頼スコア MODEL

explainable by design

$$score = 100 - \Sigma\, w_i \cdot flag_i$$

WEIGHT BY RISK FAMILY (MAX DEDUCTION)

BANDS

80–100	60–79	40–59	0–39
低リスク	標準	要注意	高リスク

WORKED EXAMPLE · DEMO COMPANY

100 - 20 director links - 20 GST cancelled - 10 late filings = 50 → **要注意**

Research foundation	How Shinrai applies it
Akerlof (1970). The Market for "Lemons". Quarterly J. of Economics 84(3)	Frames the problem: when buyers can't verify quality, good partners are priced out too. Shinrai reduces the information gap.
Fellegi & Sunter (1969). A Theory for Record Linkage. JASA 64(328)	Probabilistic matching of one company or person across MCA, GST and court records.
Akoglu, Tong & Koutra (2015). Graph-based anomaly detection. Data Min. Knowl. Disc. 29(3)	Director-network patterns: many companies per director, clusters of struck-off links.
Altman (1968). Financial ratios and corporate bankruptcy. J. of Finance 23(4)	A transparent, weighted, banded score from public filings: the basis for our deduction model.
Lewis et al. (2020). Retrieval-Augmented Generation. NeurIPS	The Japanese summary is generated only from retrieved records, each cited.

Today's options	Japanese	Speed	Where it falls short
Consultants / legal due diligence	Yes	Weeks	Priced per engagement; unaffordable for screening many partners
Overseas credit reports	Often	Days–weeks	Ordered one company at a time; no director-network view
Indian data aggregators	No	Instant	Raw English data; no judgement, no score
Shinrai	**Native**	**< 60 s**	**Cited verdict + score + next step, built for screening**

VALIDATION PLAN: HOW WE PROVE IT WORKS (TARGETS, MEASURED DURING THE BUILD)

≥ 90%
red-flag recall on 30 companies with known public issues

≤ 5%
false red flags on 30 clean listed companies

100%
of flags link to a source record. No source, no flag

< 60 S
name to full Japanese report, end to end

NATIVE
Japanese reviewer checks report tone and terms

Weights are initial and set by the team; they'll be calibrated on the labelled test set. Competitor rows describe typical offerings, not specific vendors.

WHY NOW, THE 48-HOUR BUILD, AND THE PILOT

WHY NOW: OLD PROBLEM, NEW CAPABILITY

POLICY — *Tokyo and Delhi both pushing*

Japan's Foreign Ministry set up a Japan-India Economic Affairs Division (April 2026) to help SMEs with no Indian base. The ¥10 trillion investment goal and India's 2× target need thousands of new partnerships.

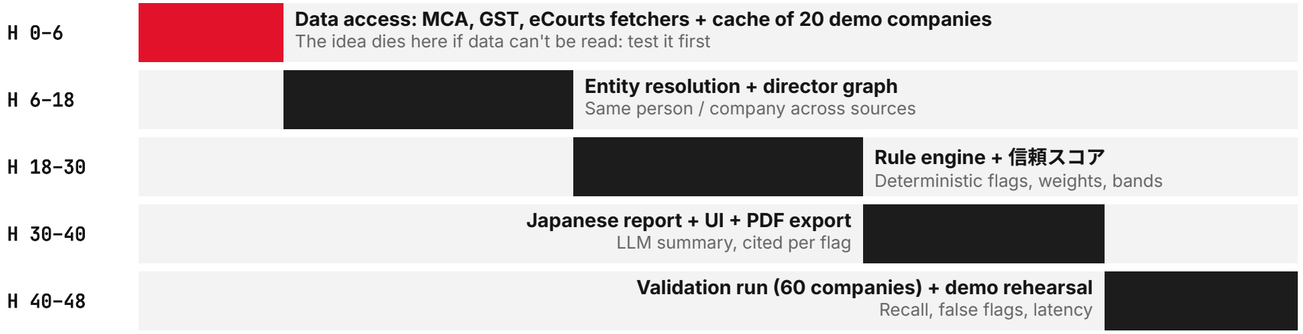

DATA — *India's registries are online*

Company, tax, court and insolvency records are now public and searchable through MCA21, the GST portal, eCourts and IBBI. The signals exist; they've just never been joined up or translated.

AI — *became good enough*

LLMs can now read Indian filings and write business Japanese in seconds. Work that needed a bilingual analyst for days becomes a 60-second, fully cited report.

48-HOUR BUILD, ORDERED BY RISK

IMPACT AND THE PILOT WE'D PROPOSE

~~WEEKS~~ → **60 SECONDS**

per partner check, so an SME can screen ten candidates instead of trusting one introduction.

PILOT JETRO business-matching desk · 4 weeks · 50 partner checks. Measure time saved per check, and how many flags JETRO staff confirm as real.

TODAY
one company checked, in English

NEXT
every JETRO match arrives pre-verified

THEN
monitoring after signing: director change, GST cancellation

信頼 · TRUST
more Japanese SMEs, safely in India

Everyone else will build a market-entry chatbot. **We build the one thing an SME needs before it signs: proof the partner is real.**

Sources: Nikkei via Tuoi Tre (3 Aug 2026); Asianet Newsable (24 Aug 2026). Pilot design is a proposal for discussion with JETRO.
